

Curriculum Vitae

About

Languages:

Java, Go, Kotlin,
Processing, D, Gleam

Stack:

Gin, Gorm, PostgreSQL,
Kafka, Redis, p5js, Ktor

Projects

compilers

[the Ixion programming language](#).

Ixion: a statically-typed language with algebraic data types $\rightarrow$ JVM bytecode. Implemented parser, type system, and code generation. No dependencies on existing compilers. Syntax: Scala + Go.

The abandonment of OOP in favor of a powerful type system allowed for the creation of a convenient and safe language while preserving the platform's capabilities.

Besides Ixion, I contributed to other projects (such as [Neva](#)), and one of my languages ([Lazurite](#)) was added to the Gitflic platform.

other projects on this topic:

[tulang](#)

(compiler to JVM, 49 stars on GitHub)

[lino](#)

(compiler to Wiring, 33 stars on Github)

[jasgo](#)

(A type-safe library for writing a compiler backend for JVM, 18 stars on Github)

algorithms & engines

For some time, I was a maintainer in [TheAlgorithms](#) community (algorithms in Kotlin), and also created a [repository](#) for implementing the most popular algorithms in Dlang.

Among the latest projects related to rendering engines: [Zont](#) - an engine written in Go, which is capable of rendering 3D models in the console

2018 - 2020

I started programming on Scratch at the age of 10. I participated in various events and won prizes.

2020 - 2022

I switched to Java, but I was still interested in game development, so I worked on game development using Java and Processing. I also worked briefly as a game developer.

2022 - 2025

I became interested in web application and compiler development. I wrote compilers for Wiring, JVM, and other platforms, as well as interpreters. I worked on various programming languages. My most popular projects were: [Ixion](#), [Lazurite](#)

I began to shift from game development to engine development. I completed projects developing mobile apps and other services.

In the summer of 2025, I started switching from Java to Go for backend development.

2025 - 2026

I remain interested in programming language development and am actively studying languages that interest me (for example, Gleam, D, Neva, Elixir).
